ABOUT

I am a Software Developer specialized in HTML, CSS, JavaScript, and React. Skilled in creating intuitive, user-friendly and responsive websites and applications.

SKILLS

HTML | CSS | TypeScript | ReactJS | Redux | Angular | Tailwind | PostgreSQL | Firebase | Java | Git

EXPERIENCE

Full-Stack Developer intern at JUMIA - Feb 2023 - Aug 2023

As a Full Stack Developer, I collaborated closely with a cross-functional team to design and implement user-friendly and responsive web interfaces using Angular and TypeScript for the Frontend. On the backend, I contributed to the development of robust server-side functionality and APIs using Java and Spring Boot, emphasizing efficient data processing.

Freelance Developer - Aug 2023 - Present

My freelance journey has provided me with valuable experience, enabling me to continuously expand my skill set while delivering high-quality software solutions tailored to each client's unique requirements. My ability to optimize performance and innovate with new features underscores my commitment to delivering exceptional results in the world of development.

PROJECTS

Movie App

I re-created IMDb website preserving core features and adding new ones such as a disable button to movies that have been added to a list, a watched list, and versatile list filtering by movie, TV show and all entries.

Stack: ReactJS | Redux toolkit | React Query | Firebase | TMDb API

[Demo](#) | [Github](#)

Food e-commerce

A Full-Stack e-commerce that allows users to create authenticated accounts, manage cart items, execute card payments, and keep track of their order history.

Stack: ReactJS | Redux toolkit | Firebase | Express | Stripe API

[Demo](#) | [Github](#)

Link Saver

Save information of online products such as name, price and link in an organized way. Filter bars make it easier for you to scan through your list of products and find specific ones.

Stack: ReactJS | Java | Spring Boot | PostgreSQL
